Empathy Map — iMovies Moviegoers

Target user: a moviegoer who wants to find a movie, choose a convenient showtime, select seats, and keep a record of bookings.

Empathy area	**Insights for iMovies**
Says	“I want to see available movies and showtimes before deciding.” “I need to know which seats I booked.”
Thinks	“Will my selected seats still be available?” “Can I find my booking later?”
Does	Browses the movie catalogue, searches/filters movies, selects a date and showtime, chooses seats, confirms booking, and checks My Bookings.
Feels	Wants the process to be quick, clear, reliable, and reassuring.
Pain points	Unclear seat availability, a lengthy booking process, difficulty retrieving booking details, and uncertainty about whether a booking succeeded.
Needs / gains	Simple movie discovery, visible seat availability, secure account access, booking confirmation, and a personal booking-history page.

Design implication: keep movie discovery, showtime selection, seat selection, confirmation, and booking history easy to find. Online payment is not implemented in the current project.
