Team ID	Not provided
Project Name	iMovies - Movie Ticket Booking
Maximum Marks	2 Marks

Problem – Solution Fit Overview:

The Problem–Solution Fit ensures that the iMovies - Movie Ticket Booking platform addresses key gaps in the freelance job market and aligns with the real needs of both clients and freelancers. This validation is critical before scaling the platform.

Purpose:

- Help moviegoers discover movies and complete a booking through one clear workflow.
- Combine movie browsing, showtime selection, seat selection, booking confirmation, and booking history in one application.
- Associate bookings with authenticated user accounts and persist booking records in the database.
- Provide movie search/filtering and show-specific seat availability.
- Improve booking clarity through a user-friendly interface and a My Bookings view.

Problem Statement:

Moviegoers may face challenges such as:

- unclear booking status and difficulty retrieving past booking details
- separate steps for movie discovery, showtime selection, and seat selection
- uncertainty about seat availability
- difficulty finding a suitable movie or screening
- no convenient centralized view of personal bookings

Solution:

iMovies - Movie Ticket Booking, a modern full-stack freelance platform, offers:

- movie browsing, showtime selection, seat selection, and booking confirmation
- database-backed booking records associated with authenticated users
- movie search and genre filtering
- a My Bookings page and checks for seats already booked for the same show
- user registration and login
- Admin-controlled dispute resolution and user reporting features
- Freemium model with premium features like project boost, analytics, and early-bid access

Current Implementation and Fit

The working application has been tested for registration/login, movie browsing, selecting date/showtime/seats, booking confirmation, My Bookings persistence after logging out and back in, and preventing the same seats from being booked again for the same show.

Scope note: iMovies currently demonstrates the booking workflow. Real online payments, refunds/cancellations, and production-grade concurrent seat locking are not claimed as implemented.
